***Continuing Examination***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04-13-2004 has been entered.

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

Claim 1 has been amended to include the limitations of claims 2 and 6, now canceled. In response, the rejection of claims over WO 97/12942 in view of Li Bassi et al (4,672,079) set forth in the Final Rejection is hereby withdrawn. The claims are considered to be commensurate in scope with the showing of unexpected results in Table 2, including the data for Examples 1-4 of the invention and Comparative Examples 1-3. It is agreed that the comparative data shows that the examples of the invention containing oligomeric radiation polymerization initiator KIP 150 have improved curling properties while maintaining hardness. See Example 1 compared with comparative examples 1 and 2. The data for example 2 compared with comparative example 3 does not show improved curling properties but does show an improved pencil hardness for the examples according to the invention.

The showing of unexpected results in Table 2 is also considered to be sufficient to overcome any rejection based on obviousness or obviousness-type double patenting over each of Baba et al (6,355,703), Baba et al (6,013,749) and Yashiro et al (6,521,677). Each of the references claims compositions comprising the particles obtained by bonding a metal oxide to a polymerizable unsaturated group through a urethane or thiourethane linking group and a photoinitiator and discloses that oligomeric KIP 150 and oligomeric KIP 100F, among other photoinitiators, are suitable photoinitiators.
